# Tutorial 2

## Demonstration of Paas Application

Bafna Gold

Tutorial-2

Introduction to Paas & salesforce.

What is Paas? Explain definition and benefits.

Platform as a service is a cloud computing model that provides a complete platform over internet of developing, testing, deploying and managing applications without worrying about infrastructure.

Benefits of Paas.

* No infrastructure management
* Faster development
* Scalability
* Cost effective
* Collaboration friendly
* Automatic updates

Examples of Paas.

* Salesforce
* AWS Elastic Beanstalk
* Google App Engine.

What is trailblazer playground?

A trailblazer playground is a free, hands-on-salesforce developer environment provided through trailhead.

what is process automation in salesforce?
Process automation in salesforce means using built-in tools to automatically perform tasks, trigger actions and enforce business rules without ~~business rules~~ manual intervention

How companies use salesforce PaaS for business apps?
Companies uses salesforce as a platform as a service to build custom business applications without managing servers, databases or infrastructure.
Instead of developing software from scratch, businesses use salesforce's cloud platform to quickly create scalable and secure apps.
