Introduction to Saas and CRM

1) What is saas

Saas stands for software as a service. It is a cloud computing model where software applications are provided to users over the internet. Users access the software through web browser, eliminating the need for installation and maintenance on their local machines.

Benefits of Saas

* cost savings: Saas eliminates the need for upfront hardware and software investments, reducing costs for businesses.
* Scalability: Saas allows users to easily scale up or down based on their requirements, paying only for the resources they use.
* Accessibility: Users can access saas application from any device with an internet connection, enabling remote work and collaboration.
* Easy updates: Saas providers handle software updates and patches, ensuring users always have access to the latest features and improvements.

Examples of Saas : Salesforce, Hubspot, Zoho CRM, Microsoft Dynamics 365.

2) What is CRM and why it is important?

Customer Relationship Management is a statergic approach that businesses use to manage interactions and relationships with current and potential customers. It involves utilizing technology to organize, automate and synchronize sales, marketing, customer service and technical support.

Role of CRM:

- It sets bold aspirations.
- It sets and executes the client relationship statergy.
- It creates, manages and leads the team.

How businesses use CRM to manage customer relationships and sales?

Task	Example
Store contacts	Name, email, phone
Track leads	who is interested
Manage deals	who is buying
Follow-ups	when to call or email
customer history	what they bought before
Report	How much sales made

Key CRM features:

1) Contacts:

Stores customer details

Name

Email

Phone

Company

2) Deals
Deal as a potential sale

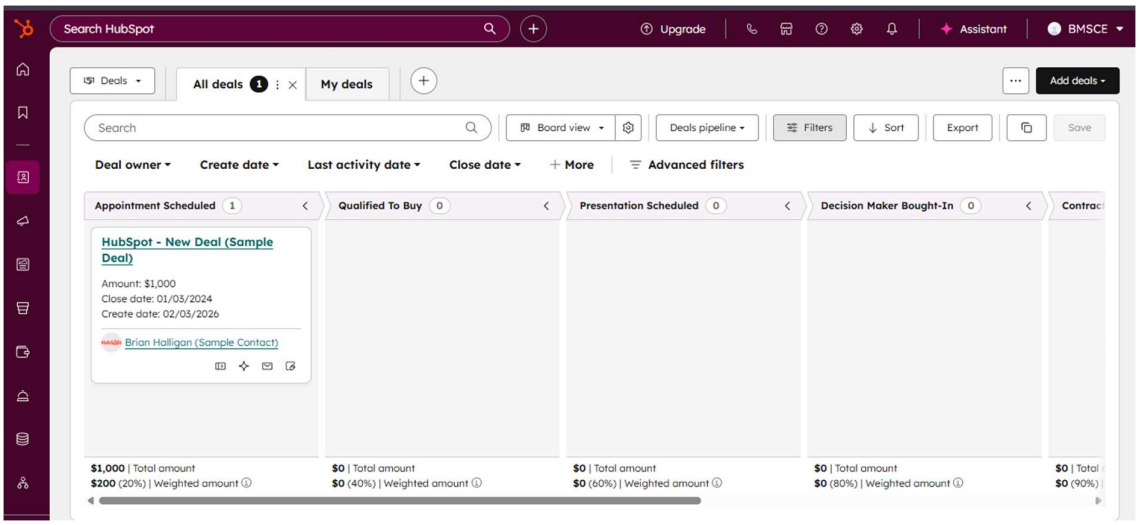
3) Pipelines
Pipelines shows the stages of a sale
Lead → Contacted → Demo → Proposal → Won / Lost
It helps to track where customer is

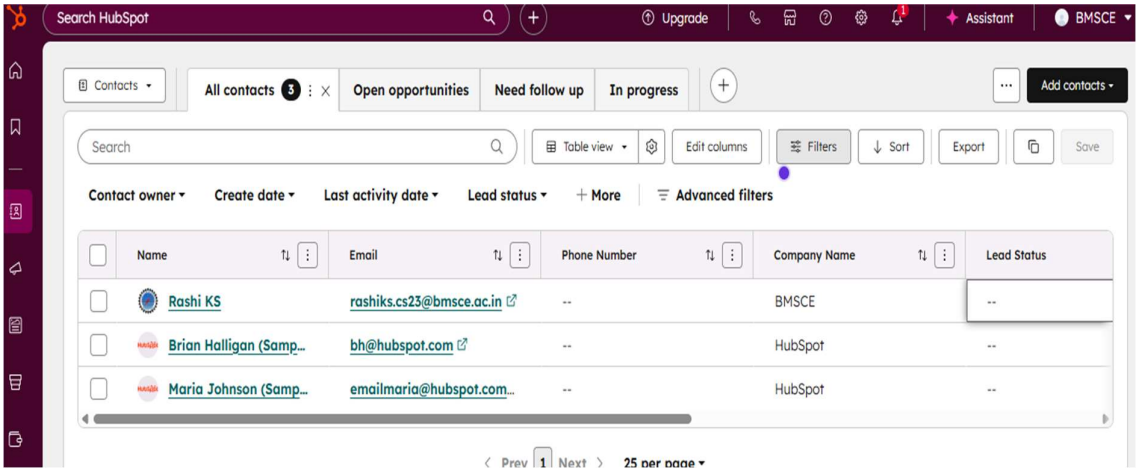
4) Automation
CRM can
- send emails automatically
- Assign leads to sales people
- Set reminders.

This saves time and avoids mistake.

CRM as a cloud-based SaaS
CRM like Hubspot or Zoho
* Runs on the internet
* No software installation.
* Works on laptop, phone, tablet

What is multi-Tenancy in SaaS
Multi-tenancy means one software serves many companies at the same time
They share the same software but not the data.
Benefits of Multi-tenancy
Low cost
Fast updates
No servers needed
High security.





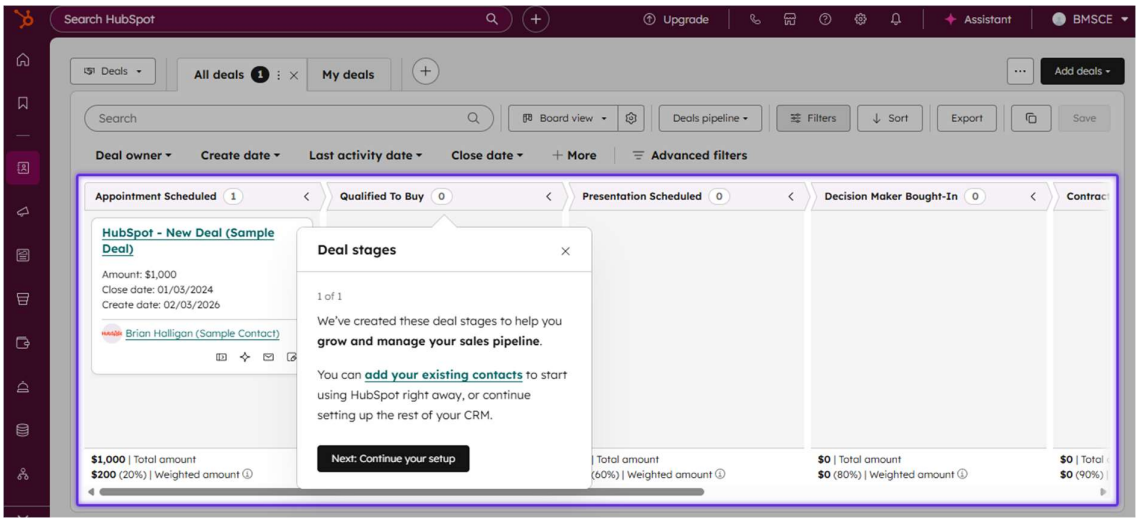
HubSpot

Tailor your experience

Add 1 or 2 contacts

Add a few contacts in the table to see your CRM in action or you can skip for now and start exploring with sample data instead.

First Name	Last Name	Email	Job title
Brian (Sample ...	Halligan	bh@hubspot.co...	Executive Chair...
Maria (Sample ...	Johnson	emailmaria@hu...	Salesperson



Automate what happens when a deal moves to a new stage
